CAREER OBJECTIVE

Dedicated to improving technical skills through continuous learning and practical application to boost organizational productivity. The goal is to contribute as a skilled technologist by developing impactful products for businesses and society.

EDUCATION

Acropolis Institute of Technology and Research <i>B.Tech in CSE-IOT — CGPA: 7.56</i>	2021 – 2025
Delhi Public School Satna <i>CBSE (Class XII) — Percentage: 72%</i>	2020 – 2021
Swami Vivekanand Public School <i>CBSE (Class X) — Percentage: 74%</i>	2018 – 2019

EXPERIENCE

Software Engineer Intern <i>AKS Enterprises</i>	Feb 2026 – Present <i>Indore, M.P.</i>
– Developed secure authentication and authorization systems for user access control and protected API endpoints. – Built FastAPI-based backend services for trade management, including transaction tracking and trade history retrieval. – Implemented account management functionalities for user profiles, balances, and account-related financial operations. – Designed PostgreSQL database schemas for efficient storage and management of trade, transaction, and account data. – Implemented input validation, exception handling, and business logic to ensure accurate financial data processing.	

PROJECTS

Shopshare <i>Python, FastAPI, React, PostgreSQL, SQLAlchemy</i>
– Built a modular async FastAPI backend using layered architecture (routers, services, models, schemas) with async SQLAlchemy and automatic schema creation on startup. – Implemented JWT-based authentication with access and refresh tokens using python-jose and secure bcrypt password hashing. – Added role-based access control using FastAPI dependency injection to protect admin-only and authenticated routes. – Built a React single-page application using React Router with axios interceptors for automatic JWT attachment to authenticated API requests.
Trading Account Management System <i>Python, FastAPI, PostgreSQL, SQLAlchemy, JWT</i>
– Developed secure authentication and authorization modules for protected user access using JWT-based authentication and role-based access control. – Built backend APIs for trade management, including trade creation, transaction tracking, and trade history retrieval. – Implemented account management functionalities for user profiles, balances, and account-related financial operations. – Designed PostgreSQL schemas for efficient storage and management of user accounts, trade records, and financial transactions using SQLAlchemy ORM.

TECHNICAL SKILLS

Languages: Python
Backend: FastAPI, SQLAlchemy
Database: PostgreSQL, SQL
CS Fundamentals: Object-Oriented Programming, Data Structures & Algorithms
Tools: Git
